P/N: FU-GGT3-1722 Module

Functional Overview

The **FU-GGT3-1722** designed by Dragon basing on the MT3333 is a new generation of GPS receiving module. It's up to 66 acquisition and 22 simultaneously tracking channel, ultra-high sensitive GPS receiving module. Based on new highly integrated MTK chips and meticulously integration key parts of Dragon. In the same chip specifications, this product has faster GPS signals ability to capture, lower power consumption, more strong anti-jamming performance and more wide working voltage range.

FU-GGT3-1722 module designed with industrial requirements, using stamps package, can adapt to wet high temperature, electromagnetic interference etc. odiously working environment. It is widely used in monitoring, positioning, mapping, navigation, security applications.

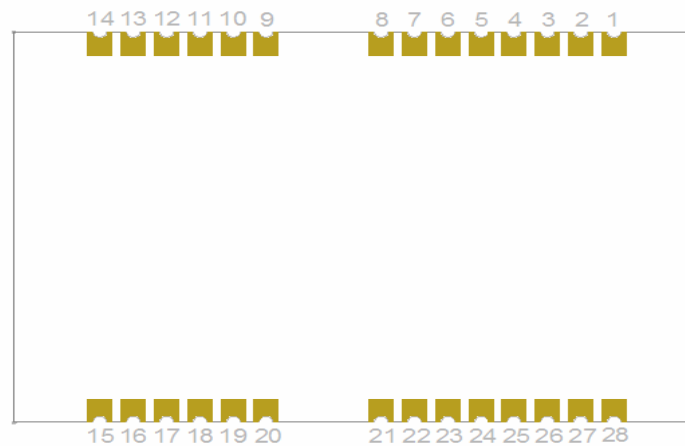

Applications

- Automotive navigation
- Personal positioning
- Fleet management
- Mobile phone navigation
- Marine navigation

Product Features

- MTK3333 high performance GPS&Glonass Chipset
- Very high sensitivity (Tracking Sensitivity: -165 dBm)
- Extremely fast TTFF (Time To First Fix) at low signal level
- Support UART interface
- Built-in LNA(with in CHIP)
- Compact size (22.4mm x 17 mm x 2.6mm) suitable for space-sensitive application
- One size component, easy to mount on another PCB board
- Support NMEA V4.1
- Support OSP protocol
- MEMS Support: 3-axis Magnetometer for compass heading for "Point and Tell" feature
- MicroPower Mode (MPM) : Reduce MPM current consumption from <500 uA
- Support SBAS (WASS, EGNOS, MSAS, GAGAN)

Product Specifications

Parameter	Specification
Chip	MTK3333
Receiver Type	GPS L1 frequency band 1575.42 MHz, C/A code, Glonass L1, frequency band 1602-1615 MHz, 66 Channels
Sensitivity	Tracking -165dBm Acquisition -148dBm(cold)/-163dBm(hot)
Accuracy	Position < 5 M (Typical Open Sky) Velocity 0.1m/s
Acquisition Time	Cold Start 25s (Typical Open Sky) Warm Start 22s Hot Start 1s
Power Consumption	Tracking 28mA @3.3V Typical Acquisition 42mA @3.3V
Navigation Data Update Rate	1Hz
Operational Limits	Altitude Max 18,000m Velocity Max 515m/s Acceleration Less than 4g
Protocol Support	NMEA 0183 Ver.4.1 Default: 9600bps 1Hz: GPGGA, GNGLL, GNGSA, GPGSV, GLGSV, GNRMC, GPVTG, GPZDA,

OPERATING Description

TIMEMARK

This pin provides one pulse-per-second output from the board, which is synchronized to GPS time. This is not available in Trickle Power mode. If do not use it, Just NC.

Wake Up

System power controller, when **FU-GGT3-1722** Power ON, this pin will output 3.3V_{dc}.

RF_IN

This pin receives signal of GPS analog via external active antenna. It has to be a controlled impedance trace at 50ohm. Do not have RF traces closed the other signal path and routing it on the top layer. Keep the RF traces as short as possible.

TX

This is the main transmits channel for outputting navigation and measurement data to user's navigation software or user written software. Output is TTL level, 0V ~ 3.3V.

RX

This is the main channel for receiving software commands from MTK demo software or from your proprietary software.

VBAT

This is the battery backup power input for the SRAM and RTC when main power is off. Without the external backup battery, **FU-GGT3-1722** will always execute a cold star after turning on. To achieve the faster start-up offered by a hot or warm start, a battery backup must be connected. The battery voltage should be between 2.5V and 3.6V.

VCC

This is the main power supply to the engine board. (3.1V_{dc} to 3.6V_{dc})

SOFTWARE COMMAND

NMEA Output Command

NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS specific messages all start with \$GPxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

The **FU-GGT3-1722** supports the following NMEA-0183 messages: GGA, GSA, RMC. The module default NMEA-0183 output is set up GGA, GSA, GSV, RMC and default baud rate is set up 9600bps.

Table 1: NMEA-0183 Output Messages

NMEA Record	DESCRIPTION
GGA	Global positioning system fixed data
GSA	GNSS DOP and active satellites
GSV	GNSS satellites in view
RMC	Recommended minimum specific GNSS data

Recommended Reflow Profile:

Pre heating temperature: 150±10[°C]

Pre heating time: 90±30[sec.]

Heating temperature: 235±5[°C]

Heating time: 10±1[sec.]

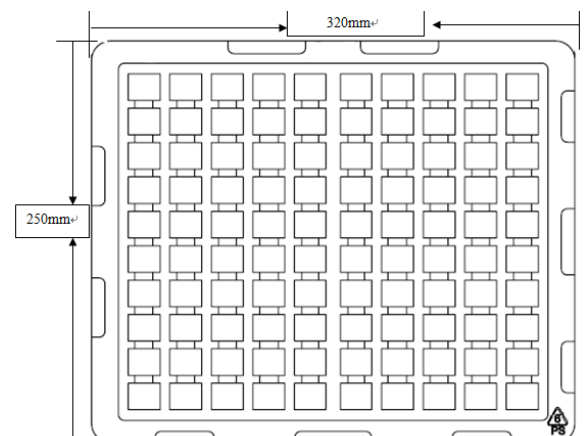

Peak temperature must not exceed 240 and the °C he duration of over 200°C should be 30±10 Seconds.

The module package specification

The module package includes inner packing and outer packing,the accurate e-tray is used for inner packing,and the carton is used for outer packing.

Inner packing

- Size : 320(L)x 250(W)x7(H) (mm)
- Packing unit : 100pcs of per tray
- Inner packing diagram

Outer packing

- Size : 330(L)x 260(W)x 86(H) (mm)
- Packing unit : 10 trays of per carton
- Quantity : 1000pcs of per carton
- Outer packing diagram
